MANOJ KUMAR PARIKE

Senior DevOps Engineer | AWS | Azure | Kubernetes | OpenShift | Terraform

manojmk1317@gmail.com | +91-8688182392 | +357-94402485 | Cyprus | linkedin.com/in/manoj-kumar-3725b023a

PROFESSIONAL SUMMARY

Results-driven Senior DevOps Engineer with **7+ years** of experience in AWS, Azure, and DevOps practices across **Telecom OSS/BSS domain** (AT&T/TMO & Vivo). Expertise in CI/CD pipelines, Kubernetes orchestration, Infrastructure as Code (Terraform), and cloud-native solutions. Proven track record in cost optimization using AWS Graviton, Service Mesh implementation, and GitOps practices.

KEY ACHIEVEMENTS

✓ Managed CI/CD for **50+ microservices** across AT&T/TMO & Vivo
✓ Reduced infrastructure costs by **~30%** using AWS Graviton multi-arch Docker images
✓ Migrated **40+ services** to Istio Service Mesh (mTLS) for secure communications
✓ Reduced MTTR by **~25%** with Alert Manager | Saved **8+ hrs./week** via AMI automation

TECHNICAL SKILLS

Category	Technologies
Cloud Platforms	AWS (EC2, EKS, S3, RDS, VPC, IAM, Route53, ELB, Auto Scaling, SNS, SES), Azure (AKS)
Containerization	Docker, Kubernetes, Helm, EKS, AKS, OpenShift (OCP 4.x)
CI/CD	Jenkins, GitLab CI/CD, AWS Code Pipeline, Code Deploy, Argo CD (GitOps)
IaC & Config Mgmt.	Terraform, Ansible, CloudFormation
Monitoring	Prometheus, Grafana, Open Telemetry, Kibana, Nagios, Alert Manager
Messaging & DB	Apache Kafka, PostgreSQL, EDB pg4k
Scripting & Tools	Bash, Python, SonarQube, JIRA, Git, Bitbucket, GitHub, GitLab, Nexus, JFrog, ECR
OS & Service Mesh	Linux (RHEL, Ubuntu), Windows Server, Istio (mTLS, Traffic Control)

CERTIFICATIONS

- **Agentic Development using Cursor** – AGS Aim Power Together, Center of Excellence (2026)

PROFESSIONAL EXPERIENCE

Senior DevOps Engineer | Amdocs**, Pune & Cyprus**

March 2021 – Present

Client Engagements:

AT&T / T-Mobile (TMO)	Billing Domain | Telecom | March 2021 – October 2025 | Jenkins*, AWS, EKS, Terraform, Helm, Argo CD*
Vivo (Brazil Telecom)	OSS Domain | Telecom | October 2025 – Present | OpenShift*, GitLab CI/CD, Kafka, Helm, PostgreSQL, Prometheus*

Key Responsibilities & Achievements:

- Designed and maintained **CI/CD pipelines** using Jenkins & GitLab CI/CD, ensuring reliable deployments of **50+ microservices** across DEV, QA, UAT, and PROD environments
- Reduced infrastructure costs by **~30%** by building **multi-architecture Docker images** (x86 & ARM) for AWS Graviton instances
- Migrated **40+ microservices** to **Istio Service Mesh** implementing mTLS for secure service-to-service communication across 2 client environments
- Provisioned cloud infrastructure on **AWS and Azure** using Terraform; implemented **GitOps practices** with Argo CD for Kubernetes cluster synchronization
- Configured **Prometheus, Grafana, and Open Telemetry** monitoring across **100+ services**, enabling real-time visibility and reducing MTTR by **~25%**
- Automated AMI image uploads across **15+ AWS regions** using Bash/Python scripts, saving **8+ hours/week** of manual effort
- Managed **OpenShift (OCP 4.x)** clusters for Vivo OSS environment, handling Helm chart deployments, Kafka (Strimzi), and PostgreSQL (EDB pg4k)
- Managed **multi-environment deployments** (DEV, QA, UAT, PROD) using branch-based GitOps workflows in GitLab, ensuring controlled, auditable, and rollback-ready release pipelines
- Configured and managed **Kafka (Strimzi Operator)** and **PostgreSQL (EDB pg4k)** on Kubernetes for Vivo OSS platform, handling resource tuning, storage sizing, and replica management
- Managed **Helm chart values** and configurations across multiple environments, performing branch comparisons and controlled mergers between UAT and PROD branches in GitLab
- Led root cause analysis and resolution of **critical production incidents** and core escalations, implementing permanent fixes to prevent recurrence
- Collaborated with cross-functional development, QA, and infrastructure teams to onboard new microservices, adopt new features, and resolve environment-related issues
- Scanned Docker containers and VMs for security vulnerabilities using industry-standard tools, ensuring compliance with organizational security standards

DevOps Engineer | UST **Global, Bangalore**

April 2018 – February 2021

- Led **cloud migration** of on-premises applications to AWS using ELB, Auto-Scaling, and fault-tolerant architecture
- Automated infrastructure provisioning using **Ansible playbooks** and **CloudFormation templates** integrated with Jenkins
- Managed **Kubernetes clusters** for Java-based microservices; designed VPC architecture with subnets, NACLs, and security groups
- Managed AWS services: EC2, S3, RDS, IAM, ELB, Auto-Scaling; configured **Nagios** for application and hardware monitoring
- Leveraged **Kops** for Kubernetes cluster management on AWS — creation, scaling, and disaster recovery of cluster assets
- Implemented **production-ready, fault-tolerant, auto-scaling AWS infrastructure** for microservices container orchestration
- Maintained Docker containers, Git repositories, and deployed applications on Apache, Nginx, and Tomcat servers
- Performed **Linux/Unix system administration** — server builds, patching, upgrades, migrations, and troubleshooting across RHEL and Ubuntu environments
